# Winter Cover Step Flap

Pat. No. 10,301,835

## for Radiant Metric Series Pools

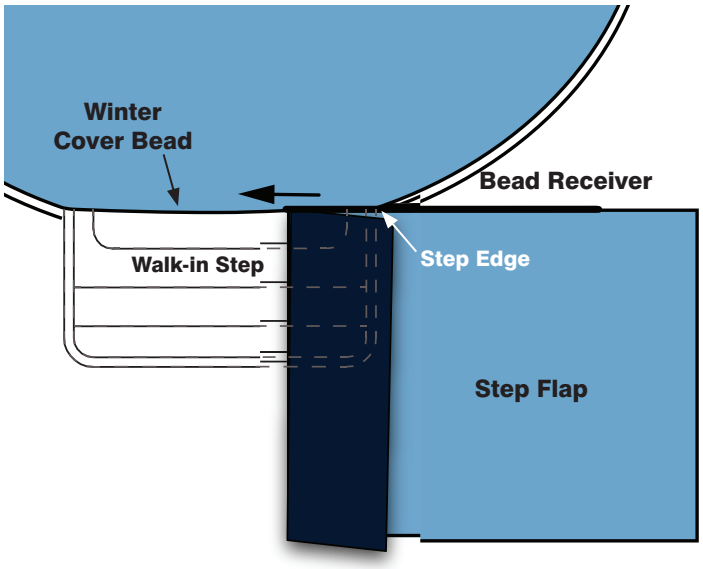

The Winter Cover Step Flap has been specially designed to cover walk-in steps on Radiant Pools. This new winter cover attachment locks into a Radiant winter cover utilizing an engineered bead reciever that is part of the step flap. The step flap can be used on winter covers for 2", 4" and Universal coping.

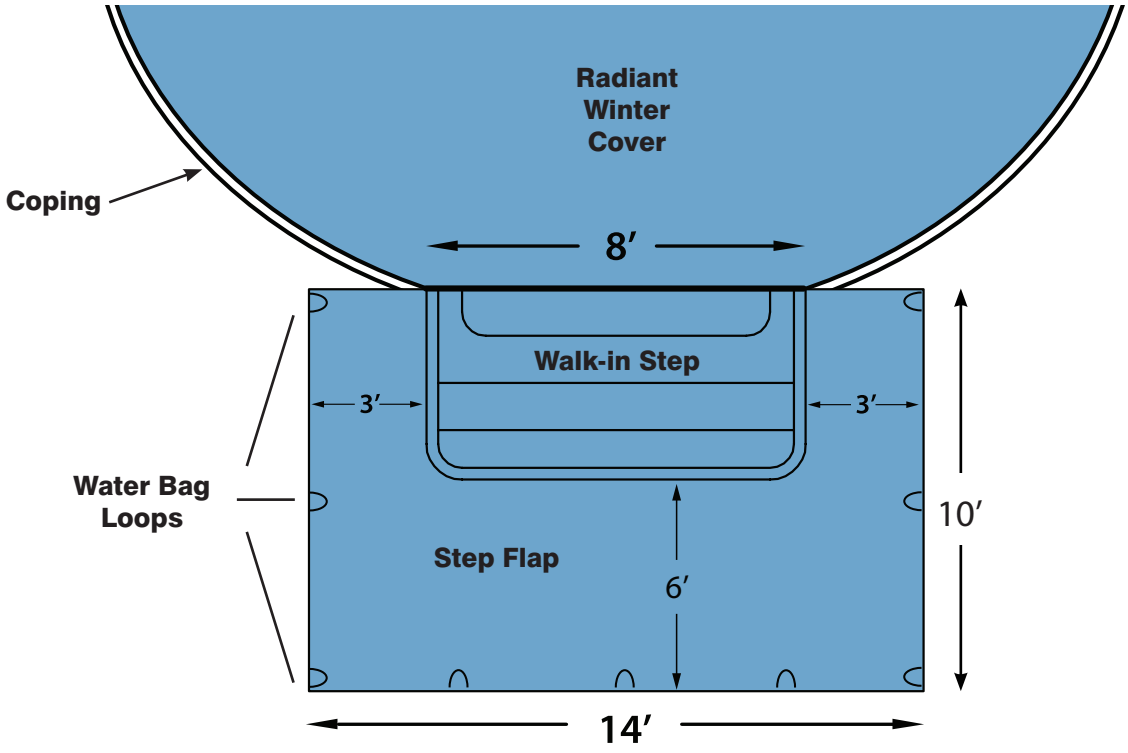

### Installation:

Install Metric winter cover by inserting the bead into the reciever track of the Radiant Metric coping.

Position the step flap so that the edge of the black bead receiver is at the point where the step meets the wall panel. Using your fingers, open the groove of the bead receiver and slide the opening over the bead of the winter cover until you've reached the opposite side of the step. Make sure that the flap material is equal on both sides of the stairs. Glue the step flap in place by applying the glue inside the bead receiver.

Single channel water bags (not included) must be used to secure the step flap. Three (3) water bags will be needed. Loops have been sewn around the perimeter of the cover to keep water bags in place. Follow water bag manufacturer instructions for filling and other information.
